

Insulation Package

After the mass research and test, we determined the best available insulation materials for our buildings. Also the optional insulation package is an important component.

Insulation Material: Formaldehyde Free Fiberglass Blanket

We use Formaldehyde Free fiberglass blanket.

We reliably insulate with a thick foil backed blanket of this safe, fiberglass insulation.

The Benefits of Insulation

- Providing comfort, reducing the cost of climate control
- Absorbing sound for better acoustics
- Helps reduce energy costs and makes financial sense
- We can provide two types of insulation:
 - 1) Insulation blanket and a tensioned, attractively finished interior liner in the color of your choice. The liner eliminates the need for additional interior build-out for aesthetic reasons.
 - 2) Insulation blanket without interior liner membrane for cost consideration.
- The finished product possesses outstanding acoustical characteristics
